AutoCAD was initially released as an AutoLISP interpreter, but was ported to C++ and later to C, and today is available in both Windows and macOS versions. I have been using AutoCAD for about 30 years, including all versions from version 7 to present. This article is about the 2018 version of AutoCAD, and some of the improvements and user-oriented changes. The version of AutoCAD that I have been using is version 2018, and the screenshots are from the 2018 Modeling release in 2017. I bought a pre-release version of 2018, and I have been using it since late 2017. I have been putting this article together from my notes. I hope that I will find a good deal of useful information. 2018 AutoCAD Overview A new look and feel. A new user interface, the system-level menus and toolbars are now customizable. New "tags" feature for entities and drawing object properties. A new three-dimensional feature, "cross section" tool. A new "arc" tool. A new filter option for tool and filter palettes. New primitives and standard libraries and special features. Raster and vector drawing modes for both layers and objects. Flat view has been enhanced with the ability to see more detail in graphics and editable text. Improved editing functionality for the text, linetypes, hatch patterns, and layer properties. A new 2D drawing option. More accurate 2D rectangular drawing with the command line tool. Faster alignment and inter-object snapping. New parts that snap together. A new tool for checking line width. The end result is a major update to AutoCAD for the modern era. I am very happy to see that this version of AutoCAD is capable of delivering a modern interface. I remember some of the limitations of the old interface, and I am sure that I did not like it. The new Autodesk interface has the same basic structure as the old interface. There are the system-level menus and toolbars on the left, and the tools and palette windows are at the bottom. AutoCAD 2018 is fully mouse driven, and so there are no more buttons to use. I tried the keyboard setup, and was impressed with the speed of
