Cerebral arteriovenous malformations in infancy. A review of the records of 14 infants with cerebral arteriovenous malformations of the hemispheres is presented. Casts of arterial feeder vessels, defined as feeders that are related to at least one other arterial feeder, are shown in 10 of 14 cases. Eight patients had significant associated neurological abnormalities. Nine infants underwent treatment for the malformation, while in the remainder, the malformation was recognized after death. Treatment consisted of resection in four cases, hemicraniectomy in three, and nonoperative management
